شركة التيار للتطوير والاستثمار الصناعي
Altayyar Company for Development and Industrial Investment

A Different Kind of Electrical Manufacturer

Saudi Arabia's industrial expansion has created a clear requirement for electrical infrastructure that is designed, manufactured, and supported within the Kingdom, in accordance with the standards of national utilities, Saudi Aramco, and the EPC contractors delivering the country's major programs.

AlTayyar was established to meet this requirement directly—as an engineering-led manufacturer capable of delivering project-specific solutions, rather than merely assembling imported components under a Saudi brand.

This profile presents that capability in full, including the company's manufacturing base, engineering methodology, qualification record, and the framework through which AlTayyar collaborates with international technology partners.

- AlTayyar competes through its engineering capabilities and depth of qualification, rather than on price alone.
- The company is positioned as a manufacturing partner with in-Kingdom production—not as a trading or product re-labeling intermediary.
- Its manufacturing platform is structured to scale as Saudi localization requirements increase across utility and industrial procurement.

A Message from the Chairman

“AlTayyar was established with a clear purpose: to build advanced electrical manufacturing capability within Saudi Arabia and reduce dependence on equipment traditionally sourced from international markets.

Every panel we produce reflects that purpose. It is engineered to meet the technical standards expected by our clients, manufactured within the Kingdom, and supported by a growing local engineering and production team.

Today, Saudi Arabia’s industrial, infrastructure, and utility programs are creating demand for this capability on an unprecedented scale. AlTayyar is responding by expanding its manufacturing capacity, strengthening its engineering systems, and building partnerships with international technology companies seeking a qualified and reliable route into the Saudi market.

This corporate profile presents the capabilities we have built, our current position, and the partnership model through which we intend to support the Kingdom’s industrial development and future growth.”

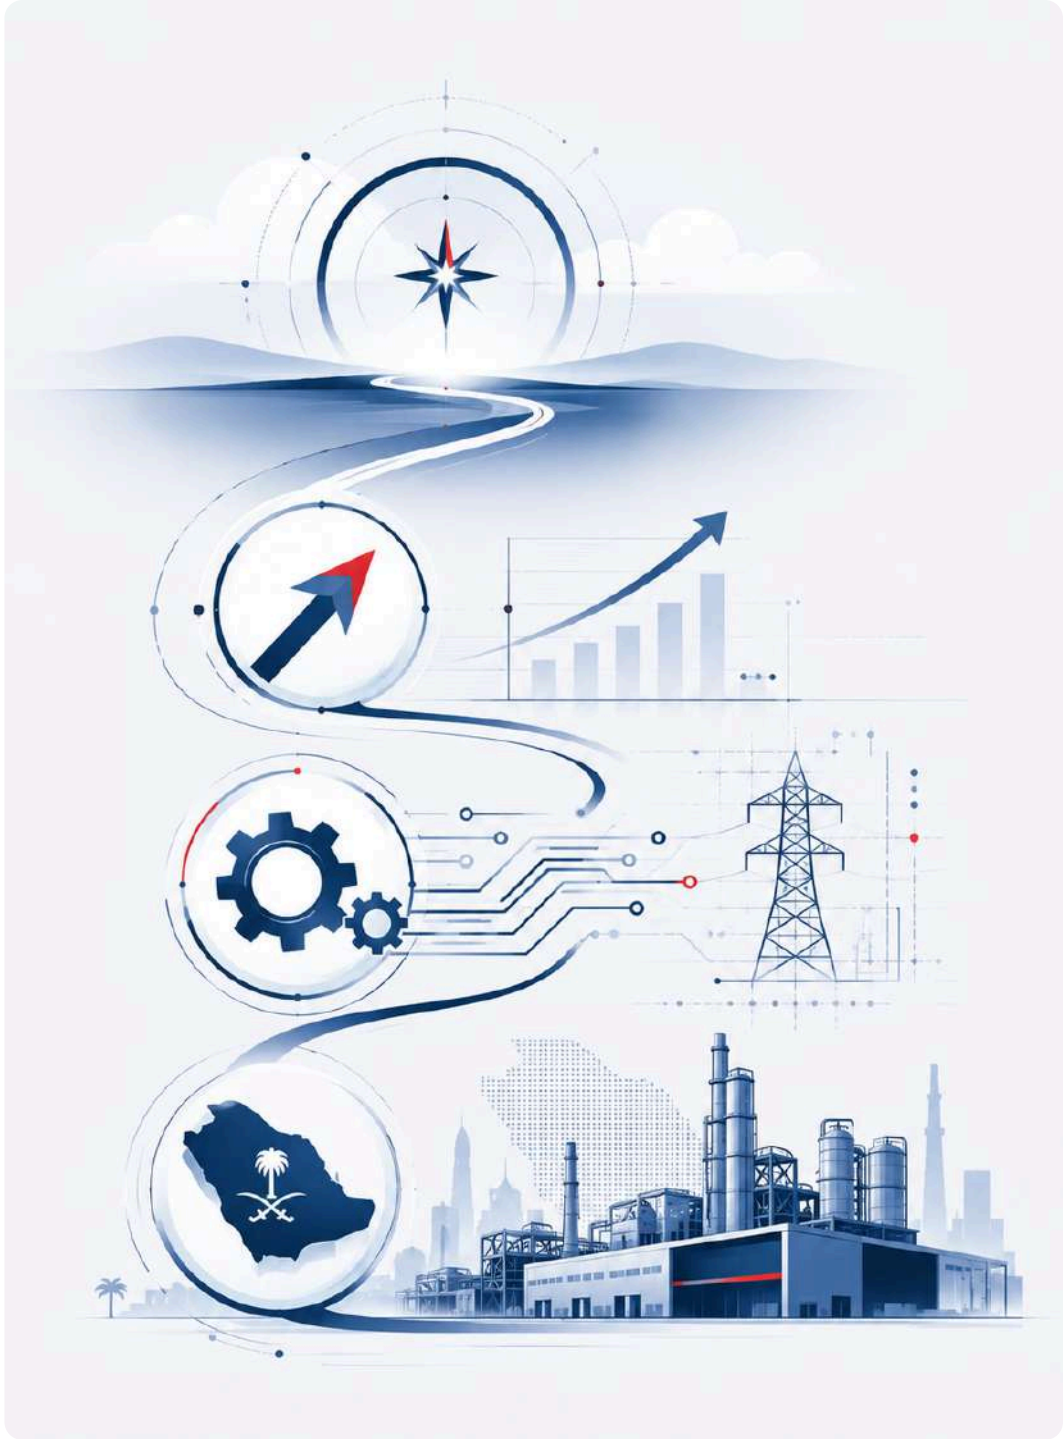
Vision & Mission

Our Vision

To become Saudi Arabia's preferred manufacturing partner for electrical infrastructure, delivering engineering excellence, advanced local manufacturing, and trusted solutions that support the Kingdom's industrial transformation.

Our Mission

To design, manufacture, and deliver high-quality electrical infrastructure solutions through engineering expertise, disciplined manufacturing, and strategic technology partnerships that strengthen local content and create long-term value for our customers and Saudi industry.



Company at a Glance

Riyadh, KSA	LV/MV Switchgear	ISO 9001:2015	5 Industries
HQ LOCATION	CORE SCOPE	CERTIFICATIONS	SECTORS SERVED

AlTayyar Company for Development and Industrial Investment is a Saudi manufacturer of low-and medium-voltage electrical products and control and protection systems. Headquartered in Riyadh, the company carries out design, manufacturing, installation, and testing for industrial, commercial, residential, and utility clients, with after-sales support extending through the operating life of the equipment supplied.

- Headquartered in Riyadh, Saudi Arabia
- Core manufacturing scope: LV/MV switchgear, control and protection systems
- Full project lifecycle: design, manufacture, install, test, support
- Current footprint: Kingdom of Saudi Arabia; GCC expansion under evaluation

FACILITY EXTERIOR + TEAM ON PRODUCTION FLOOR

Why International Partners Work With Us

Saudi localization requirements are changing how international manufacturers and EPC contractors source electrical equipment. On a growing number of projects, having a Saudi-registered vendor with in-Kingdom manufacturing and design capability is no longer simply a preference-it is a qualification requirement. AlTayyar meets that requirement today, with the engineering depth to deliver project-specific solutions rather than relying solely on standard catalogue products.

L Local Manufacturing

Saudi-manufactured and Saudi-engineered—not imported and re-labeled.

V Vendor Qualification

Registered vendor with Saudi Aramco and registered supplier to Saudi Electricity Company

E Engineering Depth

In-house engineering for project-specific design work, not standard-product supply alone

P Partnership Capacity

Manufacturing base structured to absorb joint-venture and technology-transfer production

Saudi Industrial and Electrical Infrastructure

VISION 2030 PILLAR	ALTAYYAR CONTRIBUTION
NIDLP Localization Objectives	Structural alignment through in-Kingdom manufacturing
Saudi Aramco IKTVA Framework	Manufacturing base positioned to support in-Kingdom value-add
SEC National Supplier Strategy	Registered supplier to Saudi Electricity Company

Manufacturing Facility

Fabrication	Assembly	Testing	Storage	Dispatch

AlTayyar's manufacturing operations are based in Sudair Industrial & Business City, with a production footprint of 5,000 m² designed to support the fabrication, assembly, and testing of low- and medium-voltage electrical systems. The company's head office is located in Riyadh, providing commercial, management, and client coordination functions.

Engineering Capability Is the Difference

AlTayyar's engineering team manages the complete technical lifecycle of every project in-house—from load calculations and protection coordination to panel-specific design and as-built documentation.
This capability distinguishes a true manufacturer from an assembler of purchased components. AlTayyar takes each client's project requirements and develops a compliant, project-specific solution, rather than selecting the closest standard product from a catalogue.

Core Engineering Capabilities

- In-house electrical design and engineering, not outsourced
- Protection coordination and load studies performed per project
- Project-specific panel engineering, not standard-catalogue substitution
- Full documentation and as-built compliance packages delivered with each project

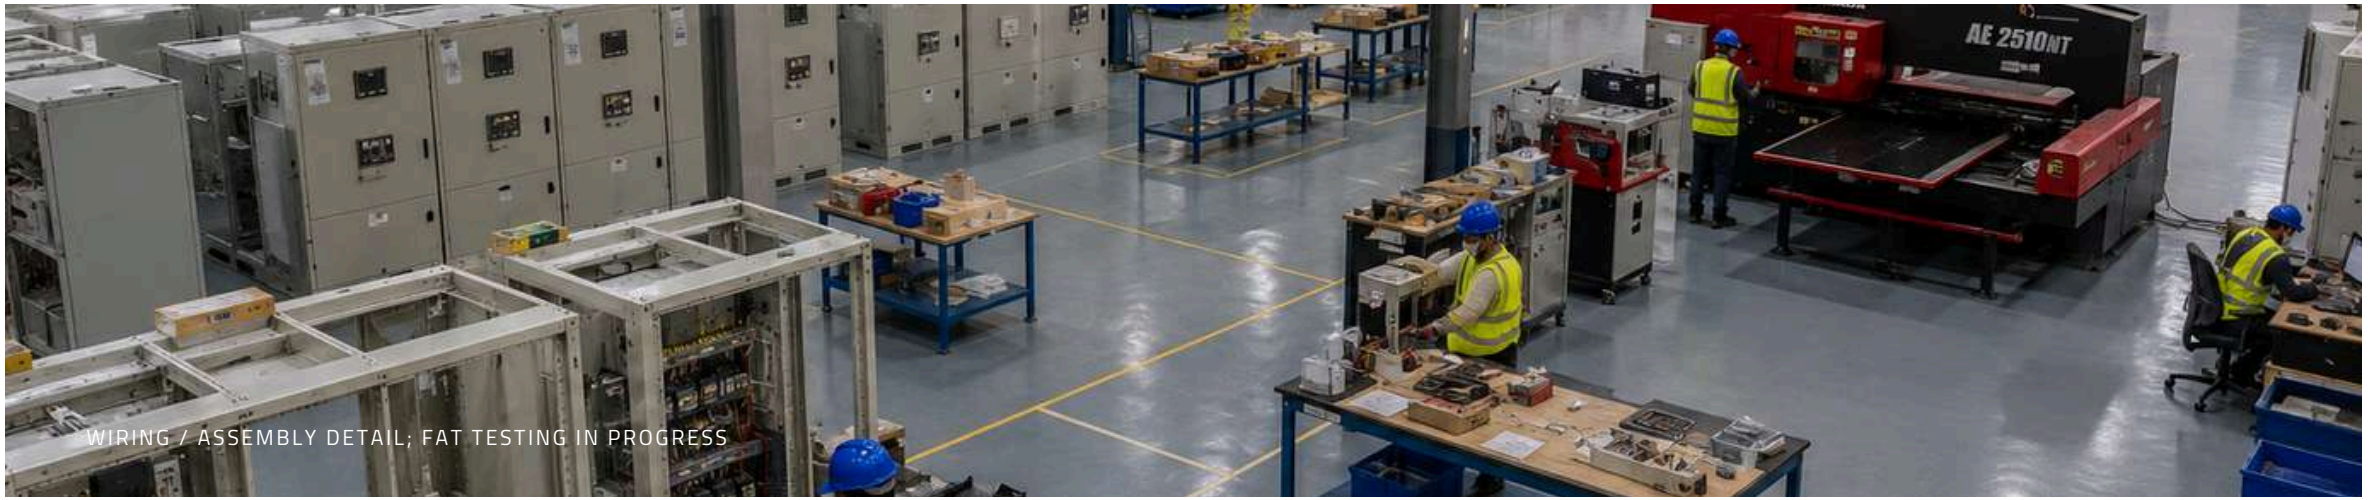
ENGINEERING WORKFLOW

A Controlled Sequence, Applied to Every Panel

Every unit that leaves the facility passes through the same controlled production sequence: engineering review, sourcing from approved suppliers, fabrication, wiring, Factory Acceptance Testing, and final quality sign-off.

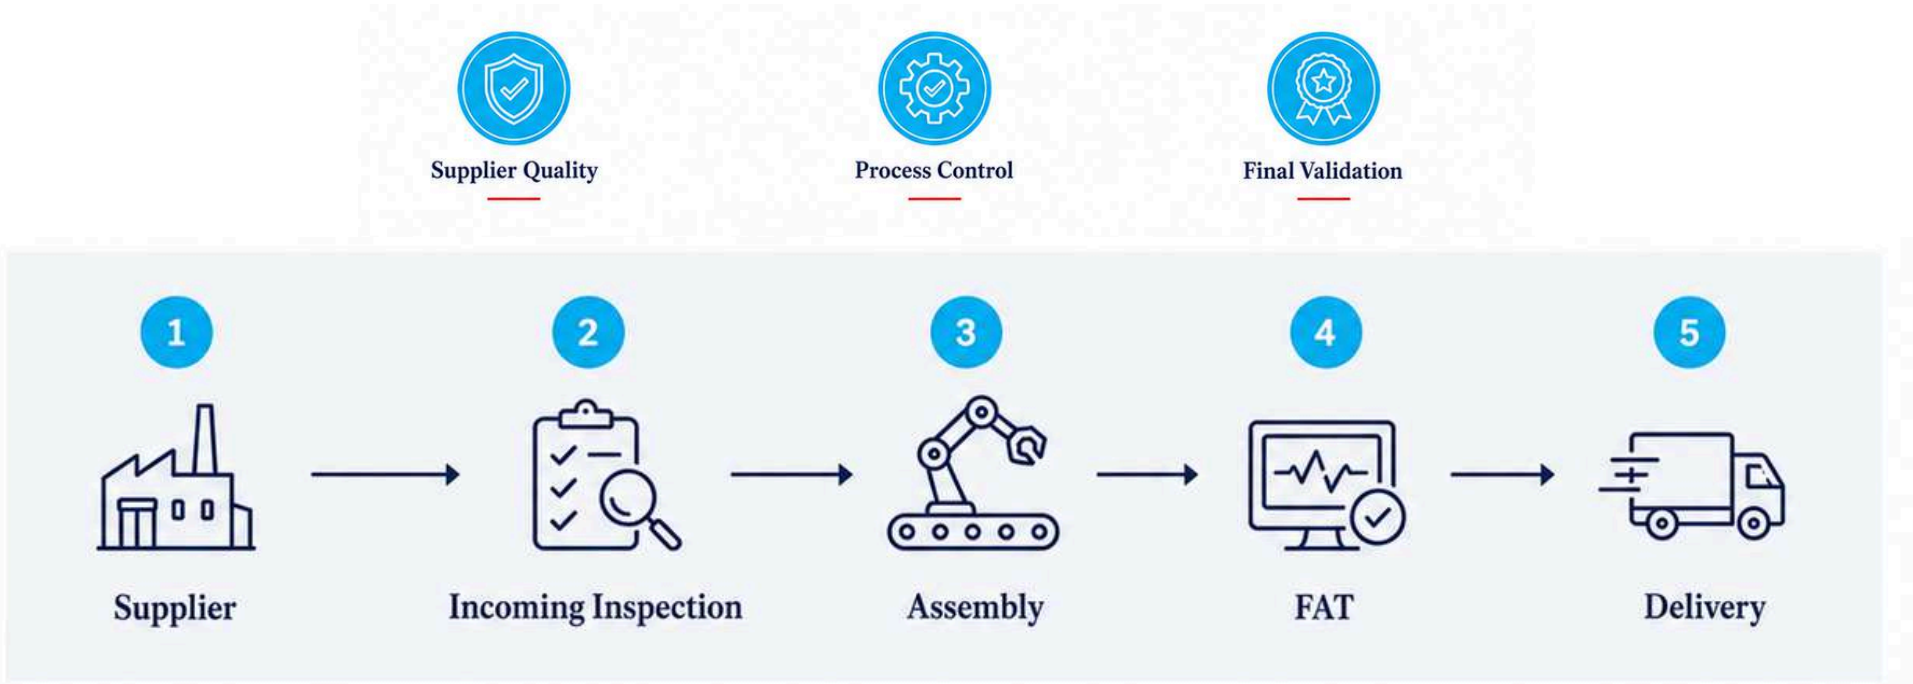
The sequence does not vary with project size—a single distribution board and a multi-panel substation package go through the same defined checkpoints. This standardized approach helps maintain consistent quality, documentation, and technical compliance as production volumes increase.

1. **Engineering Review**
2. **Sourcing**
3. **Fabrication**
4. **Wiring**
5. **FAT Testing**
6. **Sign-Off**



WIRING / ASSEMBLY DETAIL; FAT TESTING IN PROGRESS

Quality Controlled at the Source



AlTayyar operates a certified ISO 9001:2015 Quality Management System, supported by ASO-accredited Occupational Health & Safety and Customer Satisfaction Assurance Management systems. Checkpoints are built into the production sequence itself-components are verified at receipt, sub-assemblies are checked before integration, and finished units undergo Factory Acceptance Testing before release -which catches deviations at the point they occur rather than relying on inspection at the end of the line.

Manufacturing Scope

AlTayyar manufactures the core range of low-voltage power distribution equipment, including main and sub-main distribution boards, automatic transfer switch panels, synchronizing panels, final distribution boards, feeder pillars, power factor correction systems, and motor control centers.

Cable Tray Systems

AlTayyar also manufactures cable tray and cable management systems, engineered for structural durability and safe cable routing in industrial and infrastructure environments. Supplying both the switchgear and the cable management infrastructure around it allows AlTayyar to act as a single point of accountability on projects that would otherwise require two separate vendors.

Sectors We Serve

AlTayyar's equipment is deployed across the sectors that make up the core of Saudi industrial demand: energy and utilities, water infrastructure, industrial manufacturing, and commercial and residential development. Vendor registrations with Saudi Aramco, Saudi Electricity Company, and the National Water Company extend that reach into the oil and gas, national grid, and water utility segments specifically.

A Manufacturing Partner for International Technology Companies

AlTayyar's joint-venture model gives international manufacturers a structured route to establish local production in Saudi Arabia, combining our manufacturing infrastructure, regulatory qualification, and market access with the partner's product technology and engineering standards. The exchange is direct: partners bring technology and product IP; AlTayyar brings the manufacturing base, Saudi vendor registrations, and local operating knowledge required to deploy it in the Kingdom.

A Structured Route for Technology to Enter the Kingdom

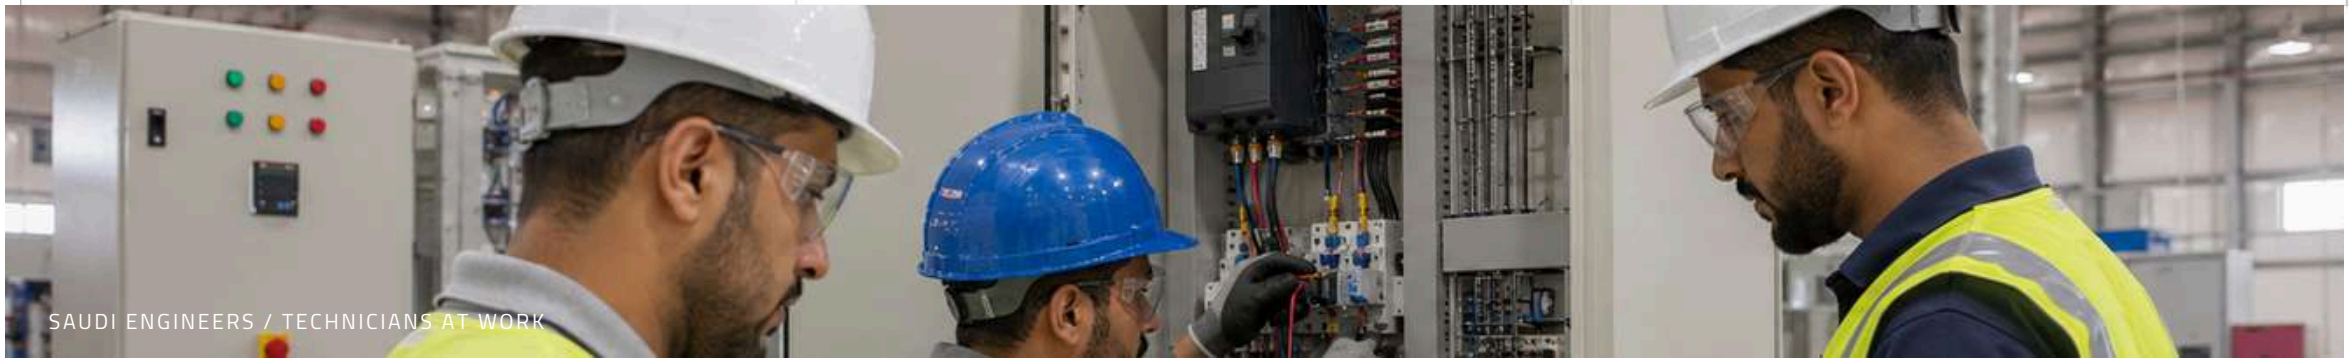
AlTayyar's technology-transfer framework provides international technology companies with a clear and structured pathway to establish local manufacturing capability in Saudi Arabia. The process moves through four defined phases: technical and commercial assessment, licensing and partnership terms, localized engineering adaptation to Saudi standards and site conditions, and in-Kingdom manufacturing under agreed quality and compliance protocols.

This approach is aligned with Saudi localization and in-Kingdom value-add requirements, including Saudi Aramco's IKTVA framework and Saudi Electricity Company supplier requirements. It gives technology owners a documented route to local production rather than relying on an ad hoc arrangement developed from the ground up.

Technology Transfer in Practice: Engineering, Training, and Local Production

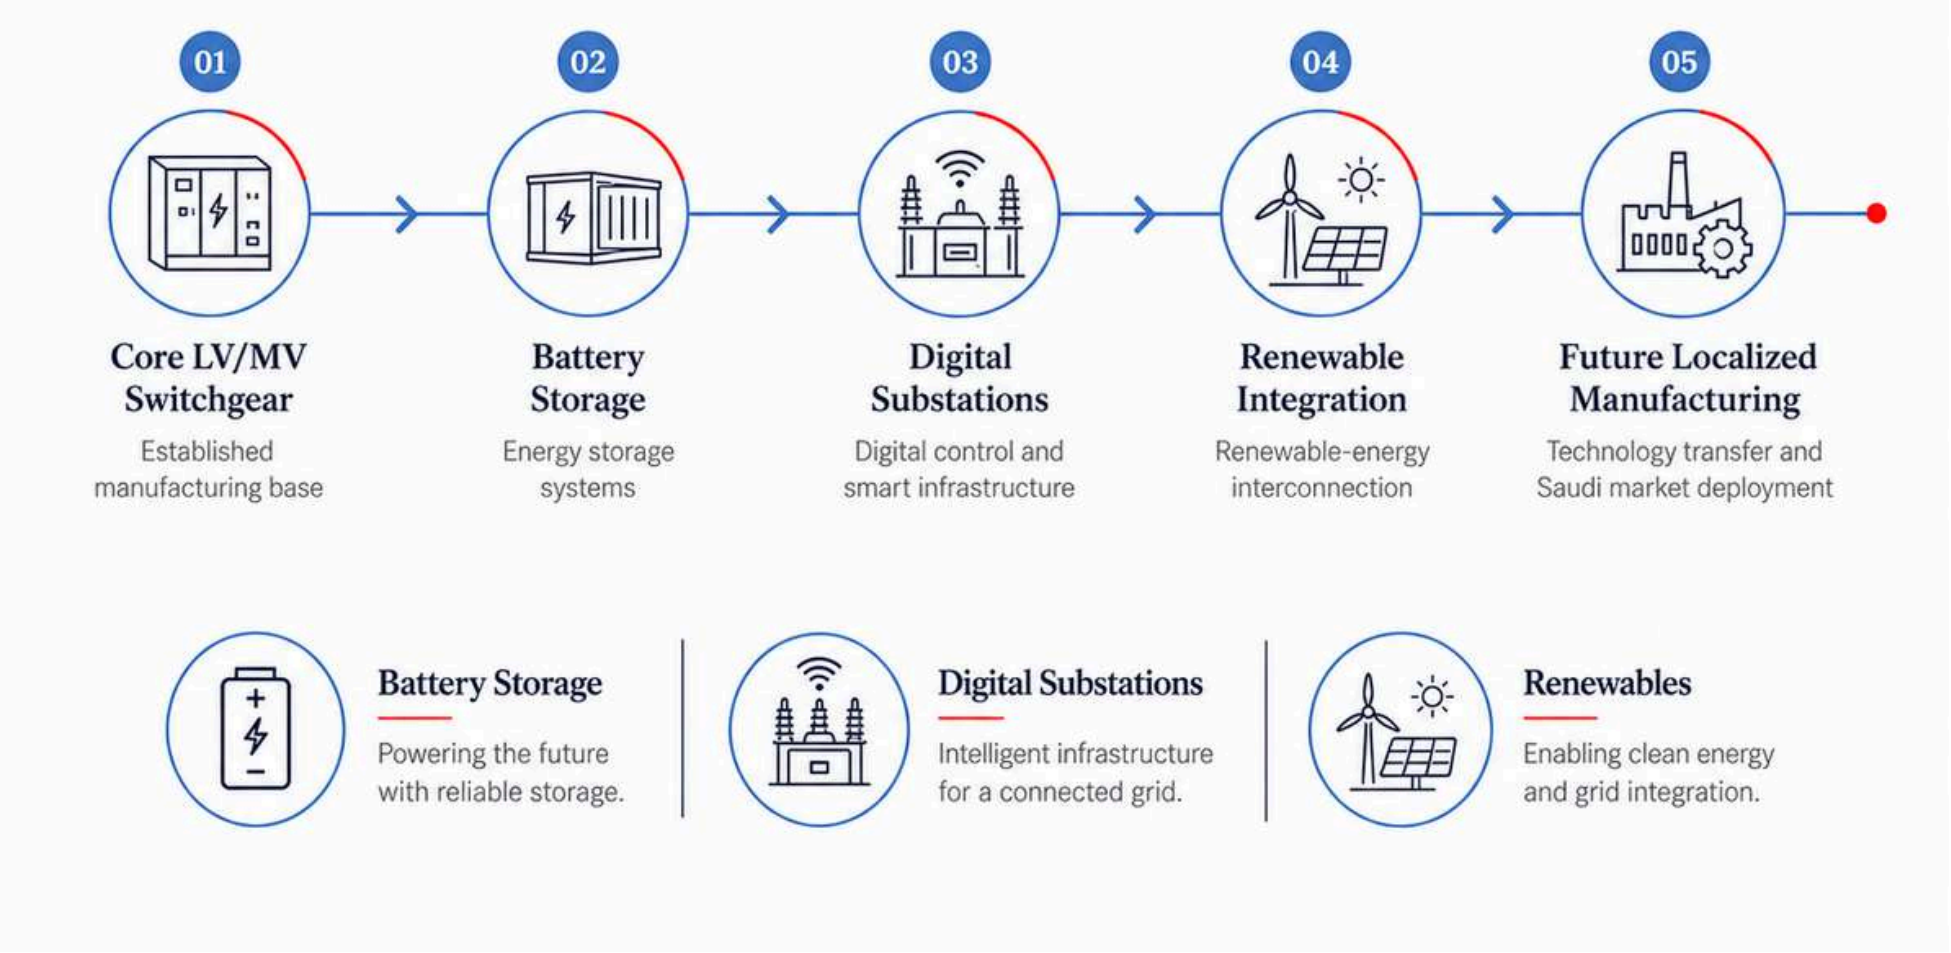
Turning Import Dependency into Domestic Capability

FACTOR	IMPORTED EQUIPMENT MODEL	LOCALIZED MANUFACTURING MODEL
Lead Time	Long —shipping & customs dependent	Short —produced in-Kingdom
Cost Exposure	Currency & freight risk	Reduced exposure, local pricing
Talent Development	Limited local skill transfer	Saudi engineering capability built



SAUDI ENGINEERS / TECHNICIANS AT WORK

Beyond Switchgear: The Next Decade of Capability

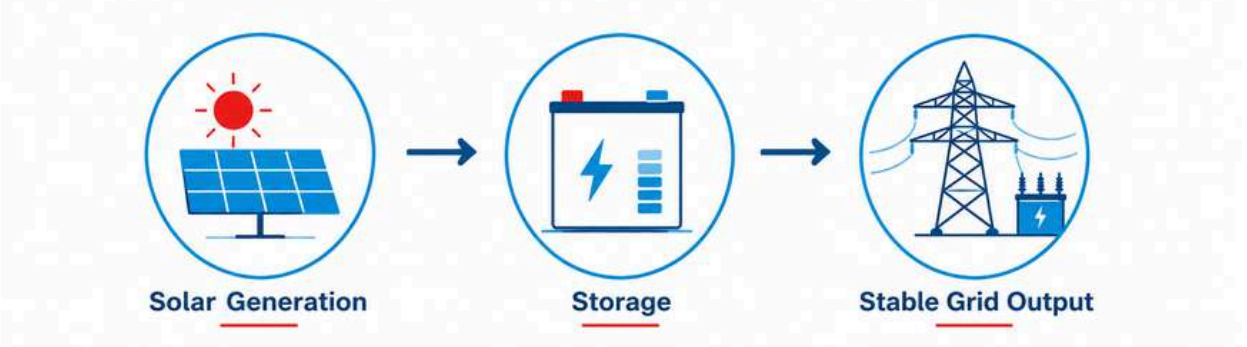


Battery Storage: A Development Priority

As solar generation scales nationally, grid-and industrial-scale battery storage will be required for peak shaving and renewable firming. AlTayyar is evaluating manufacturing and integration partnerships with established battery and power-electronics technology owners, with the objective of combining that technology with Saudi-based manufacturing and system integration. This capability is at an early stage of development and will be built through partnership rather than independently.

- Battery storage identified as a strategic development priority
- Development route: partnership with established BESS technology owners
- Objective: local integration to reduce cost and lead time on future storage requirements
- Current status: capability under evaluation, not yet an active product line

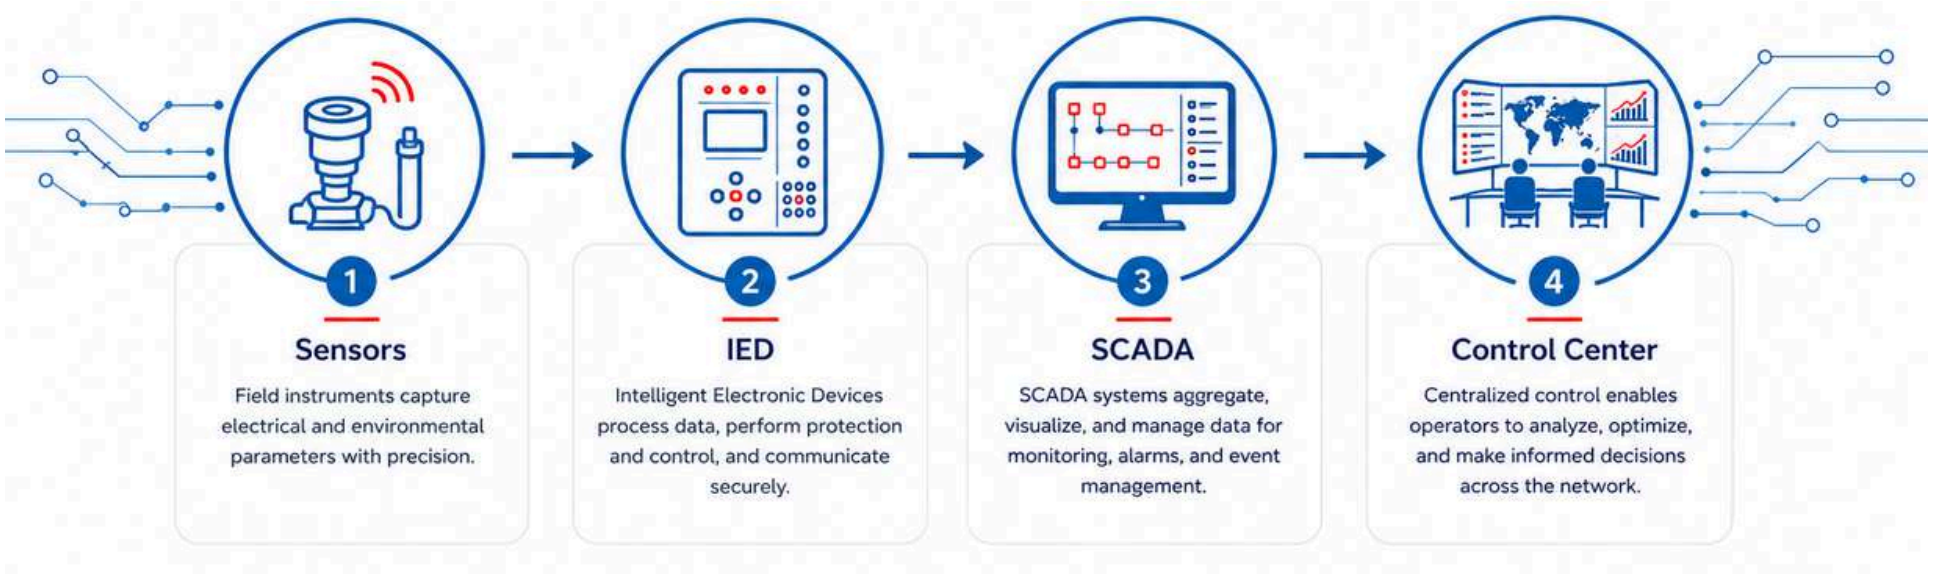
BATTERY STORAGE CONTAINER / ENCLOSURE RENDER



Digital Substation

A simplified architecture from field sensing to centralized control.

AlTayyar's digital substation architecture connects field sensing, intelligent electronic devices, SCADA systems, and centralized control to deliver real-time monitoring, advanced automation, and a unified operational view—ensuring reliability, efficiency, and informed decision-making.

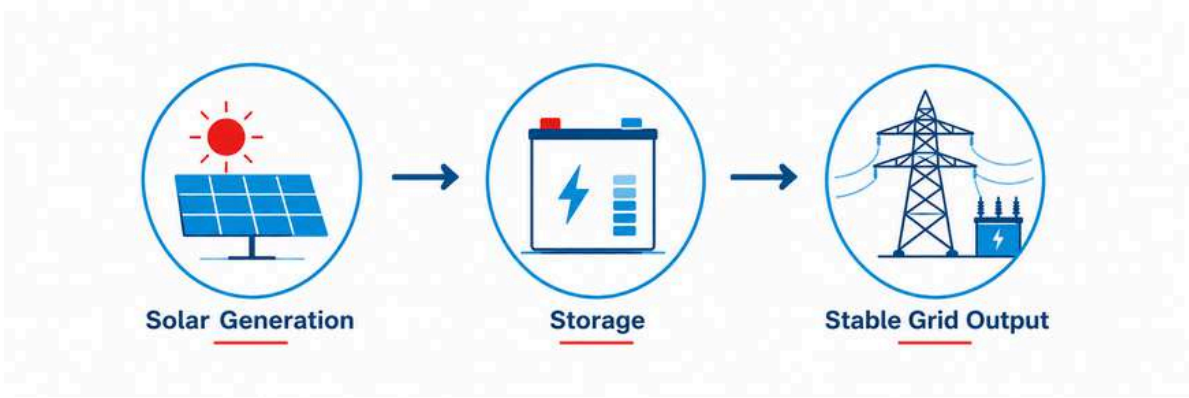


- Real-time monitoring and accurate data acquisition improve operational awareness and asset performance.
- Intelligent automation and protection enhance system reliability and reduce downtime.
- Centralized visibility empowers faster decisions and efficient management across all substations.

Electrical Infrastructure for Renewable Projects

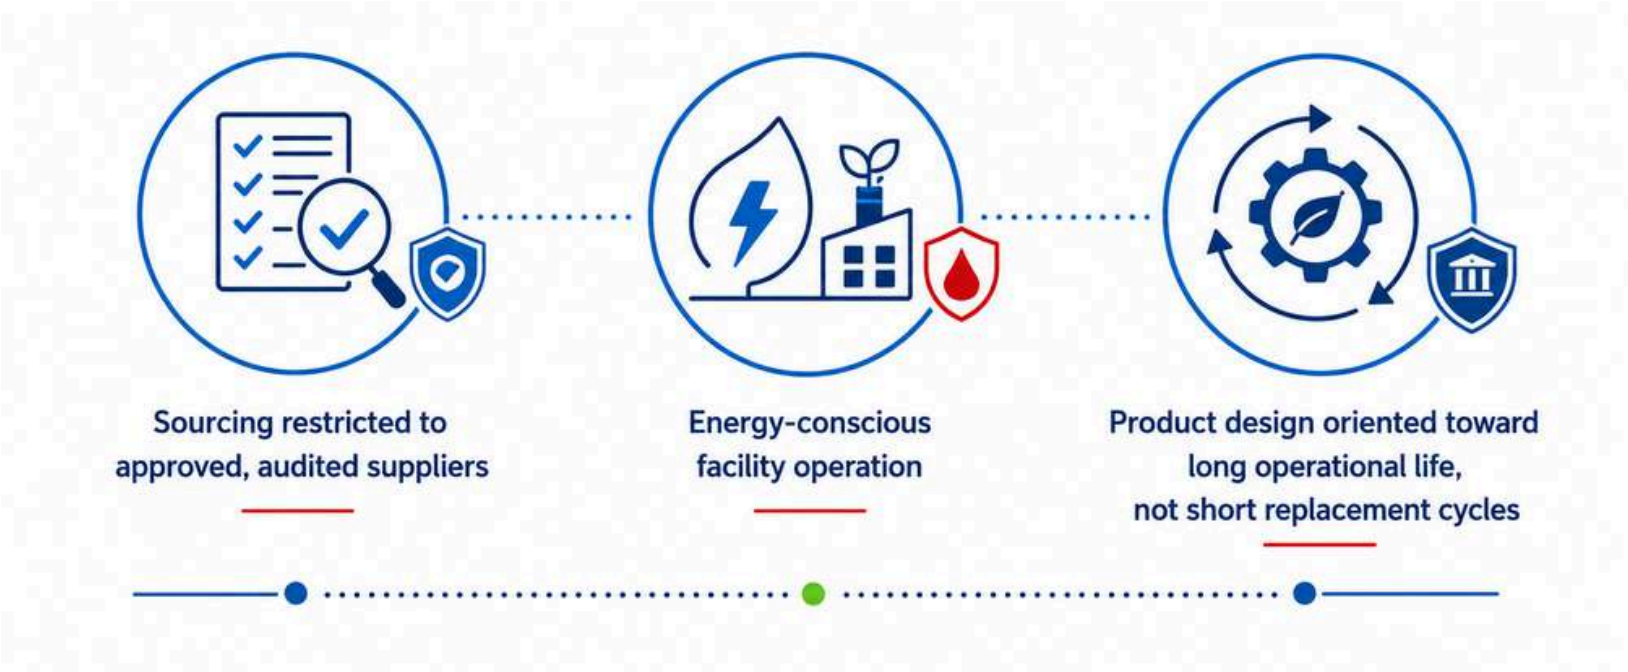
Utility-scale and distributed solar and wind projects require inverter interface panels, protection systems, and distribution equipment engineered to the specific electrical characteristics of renewable generation. AlTayyar is adapting its existing LV/MV manufacturing capability to serve this segment as the Kingdom's renewable capacity expands under Vision 2030 -extending current panel designs to renewable-specific interconnection requirements rather than building a separate product line from zero.

- Electrical balance-of-plant capability for solar and wind projects
- Built on existing LV/MV manufacturing capability, adapted for renewable-specific requirements
- Positioned to support national renewable capacity targets as they scale



Manufacturing Practice, Not a Marketing Claim

AlTayyar's environmental commitments are built into day-to-day manufacturing decisions: sourcing from approved and audited suppliers, energy-conscious operation of the production facility, and panel designs built for long operational life rather than early replacement. As Saudi industrial policy moves further toward the objectives of the Saudi Green Initiative, these practices are the basis the company will build on -not a separate program layered on top of manufacturing.



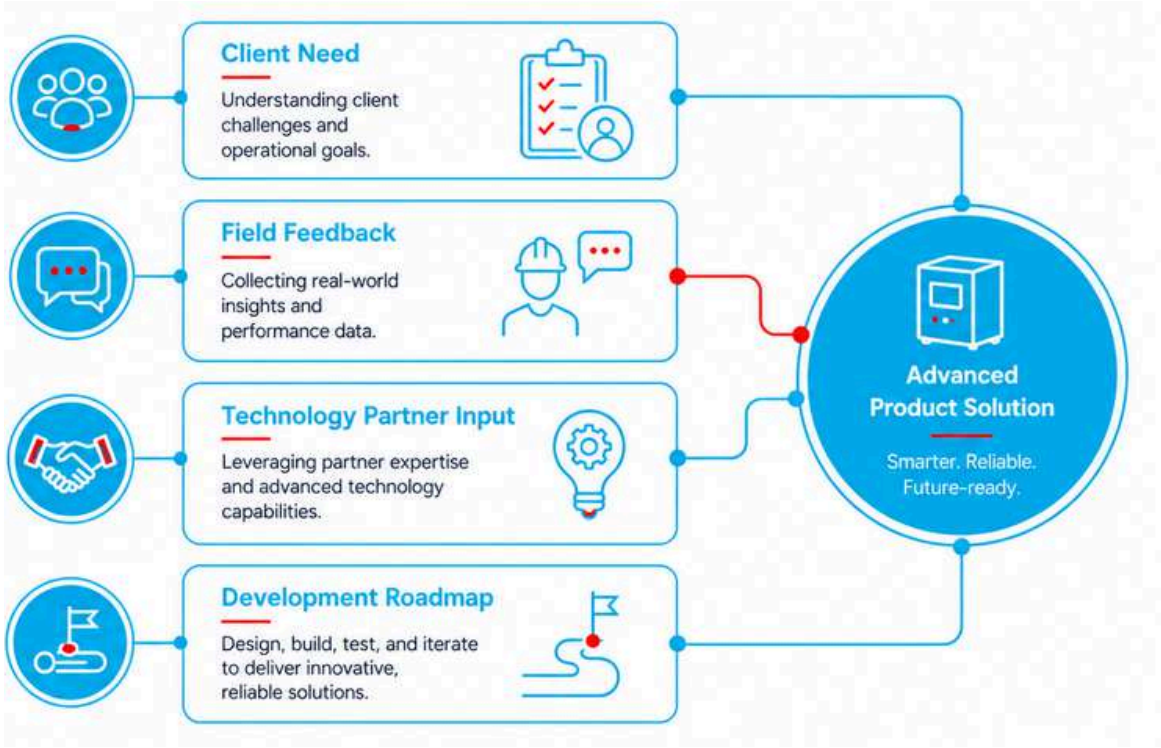
A Governance Framework for Institutional Partners

PILLAR	FOCUS AREA
Environmental	Energy efficiency, waste, materials
Social	Saudization, workforce safety
Governance	Quality systems, compliance, ethics

Product Development Beyond Current Capability

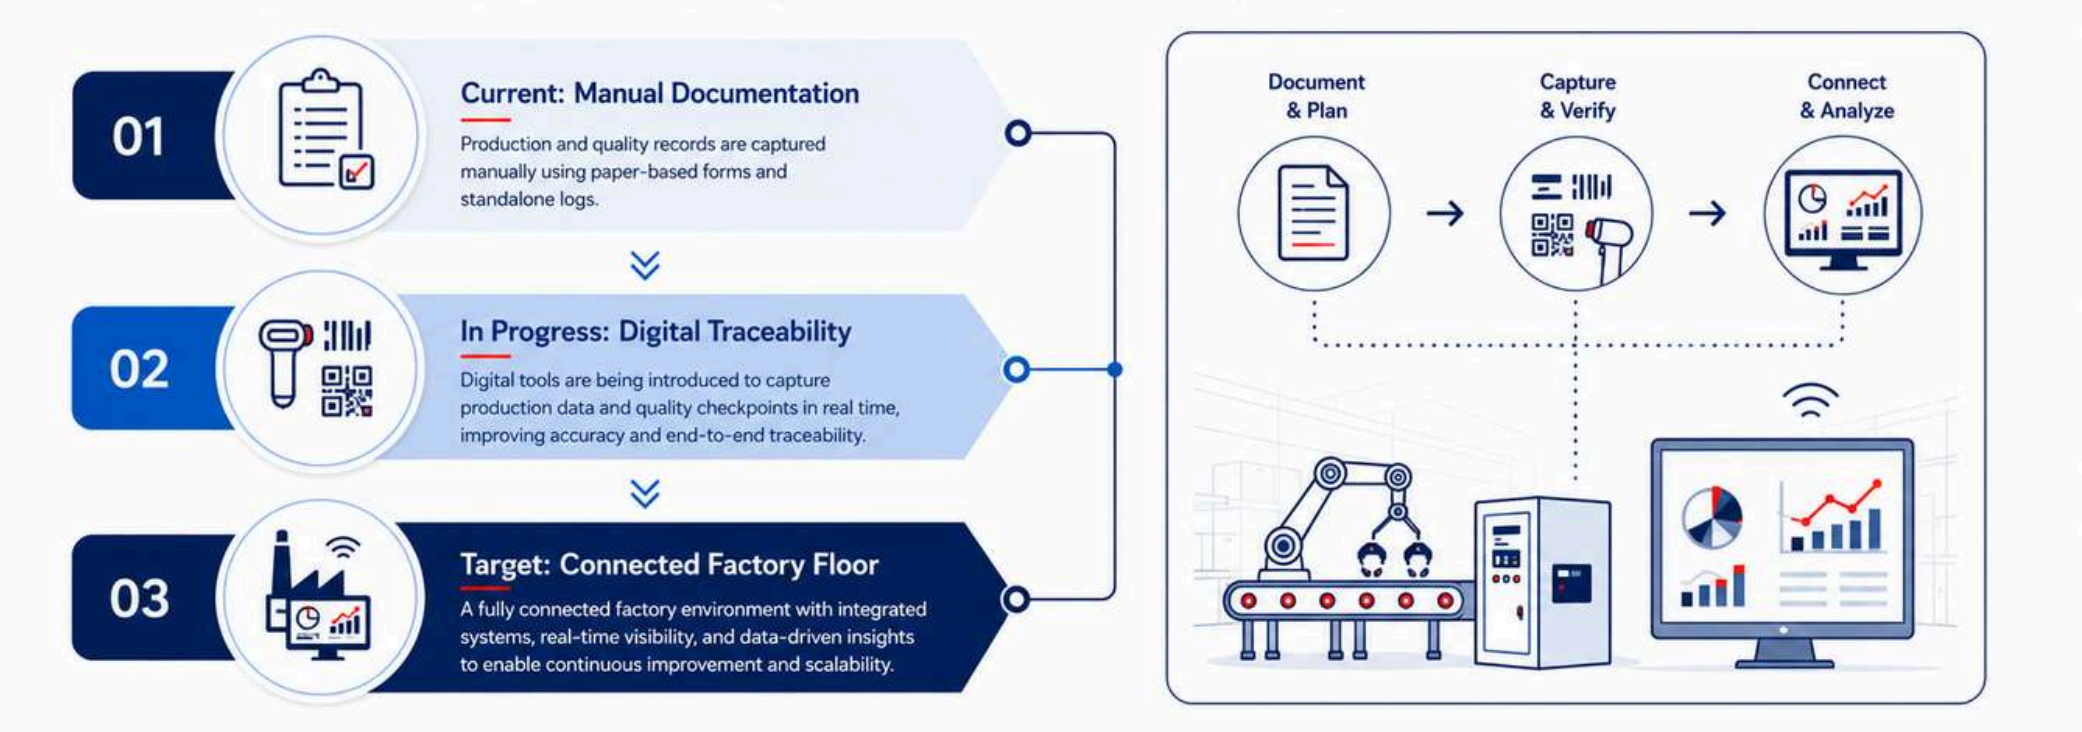
AlTayyar's engineering team is extending its scope beyond project execution into product development -adapting panel designs for digital monitoring, evaluating storage integration, and building the technical relationships with universities and international partners needed to sustain that development over time. This is a capability the company is building deliberately, starting from its existing project-engineering team rather than a separate research function.

- Product development function extending from the existing engineering team
- University and technical-institute partnerships being pursued
- Development focus: digital monitoring, storage integration, adapted panel designs
- Built incrementally, on a defined technology roadmap rather than open-ended research



Digitalizing the Factory Floor

AlTayyar is introducing digital production tracking and quality data capture into its manufacturing operations, with the objective of improving traceability from component to finished panel and preparing the facility for higher production volumes under future joint-venture arrangements. This is being implemented in stages, alongside current production, rather than as a single facility- wide rollout.



Clients

AlTayyar's client base includes companies across energy technology, contracting, industrial groups, and specialized service provision. The company is pursuing further qualification at the project level with Saudi Aramco and Saudi Electricity Company, building on its existing vendor registrations with both.

Subject:VENDOR'S REGISTRATION NOTIFICATION

Greetings ..
We are pleased to inform you that, the commercial documents have been evaluated and your compan registered with Saudi Electricity Company under Vendor No (٢٠٠٠٧٠٠٢)

To complete your technical qualification , please fill up the prequalification forms /requirements when applicable. These forms are available in SEC Website (https://www.se.com.sa/en-us/business/Pages/ManufacturersPrequalification.aspx) and please make sure to select the materials mentioned activity in your Commercial Registration

To Login EBidding System..
(https://www.se.com.sa/ebid/home) Vendor ID : ٢٠٠٠

When you logon to the system as first time , please change your password immediately through ebidding link available on SEC webpage.

Thank you for your interest to do business with Saudi Electricity Company.

Best Regard ,

Vendor Registration Notification — Saudi Electricity Company

أرامكو السعودية
saudi aramco

Saudi Aramco E-Reference No. 0000052

Registration Approval Letter

April 17, 2024

Attention : ALTAYYAR COMPANY FOR DEVELOPMENT AND INDUSTRIAL INVESTMENT

CR Number : 1010928819
Supplier Type: Manufacturer + Service Provider
Country : Saudi Arabia

We are pleased to inform you that ALTAYYAR COMPANY FOR DEVELOPMENT AND INDUSTRIAL INVESTMENT is now registered in the Saudi Aramco Supplier Management System under Vendor Code No 10117763, provided your company continues to meet all relevant Saudi Arabian and Saudi Aramco standards.

This registration however, should not be construed as a commitment by Saudi Aramco to procure from you. Being registered as a supplier only grants your company the opportunity, along with other registered sources, to respond to requests for submitting proposals in accordance with Saudi Aramco's established policies and procedures. All procurement instruments including but not limited to service contracts, purchase agreements, or purchase orders will be issued based on the name and address included in your commercial registration (CR), as stated in your Supplier Registration.

Saudi Aramco wishes to remind you that being recognized as a supplier carries with it serious obligations and responsibilities to act in a legal and ethical manner. We wish to remind you of the Saudi Aramco Supplier Code of Conduct (SCOC) which you acknowledged. Failure to abide by the principles set forth in the SCOC can result in adverse actions being taken by Saudi Aramco against you including suspension of you as a supplier. Saudi Aramco also expects each of its suppliers to satisfy each of the requirements of any procurement instrument which might be placed and to act responsibly and reliably as a supply chain supplier.

Material Suppliers should apply for Saudi Aramco Supplier Portal access by forwarding a request to portal-registration@aramco.com. The Supplier Portal is the main electronic business tool used between Saudi Aramco and its suppliers and serves to improve the flow and accuracy of key supply chain information.

For further information or assistance please contact the Saudi Aramco Supplier Help Desk by forwarding a request to SupplierHelpDesk@aramco.com or via the unified call center 800-116-1168 for In-Kingdom suppliers or +966 (11) 250-8850 for Out-of-Kingdom suppliers.

Faisal Hamad Al Dossary, Supervisor
Supplier Registration Unit
Supplier Relationship Management Div

It is the responsibility of the supplier to update Saudi Aramco Supplier Registration Profile through Ariba for the following:
1. Change of Name / Commercial Registration Number / Address / Owner(s)
2. Any change of the supplier location
3. Discontinue supply of approved commodities (9COMs and 9CATS)

This is an electronically generated letter by Saudi Aramco. To verify Supplier approval status, please contact Supplier Help Desk at supplierhelpdesk@aramco.com

Supplier registration approved by Saudi Aramco and vendor registration confirmed by Saudi Electricity Company.

Conditions:
The aim of this certificate is to qualify the manufacturer to participate in new projects or maintenance projects.
The prequalification process is subjected to assessment and review periodically.
NWC has the right to assess the manufactory during the validation period or during production process.
All equipment receives an approved third party test before installation at the site to ensure meeting project specification.
NWC does not bear any cost / expense related in manufacturing assessment, product validation test or Factory Acceptance Test (FAT).
This certificate is owned by NWC. NWC has the right to cancel this certificate if a qualified manufacturer does not comply with qualification terms, project specifications or if there are repeated product failures during the operation.
For validity of the certificate, please visit the list of approved materials or contact with the Vendor Relationship Department.
In case that one of the quality and non-toxicity certificates has expired, this certificate will be considered invalid
This certificate supersedes all previous certificates and approved sizes.

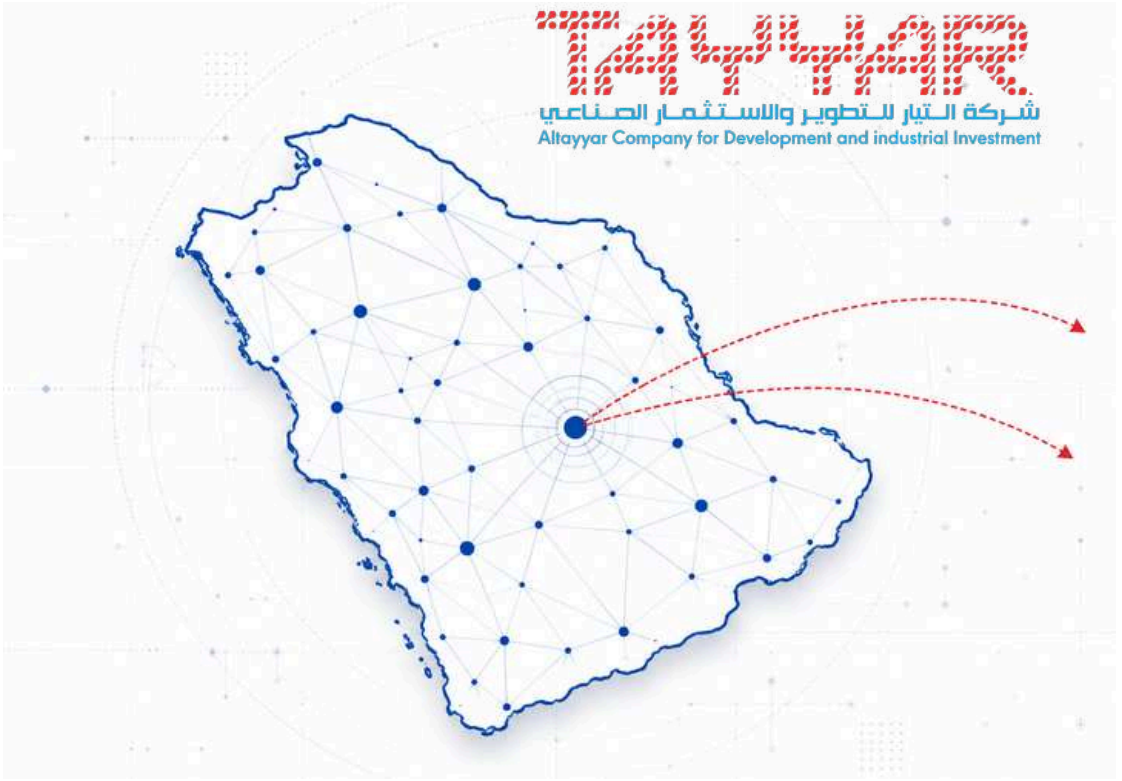
▪ Consolidate core switchgear manufacturing ▪ Convert vendor registrations into project awards	▪ Joint-venture manufacturing ▪ Technology-transfer partnerships ▪ Storage / digital / renewables roadmap	▪ Vertically integrated manufacturing platform ▪ Selected Gulf market presence

Expansion Beyond the Kingdom

AlTayyar's expansion strategy prioritizes building depth, capability, and a strong market position in Saudi Arabia before pursuing growth elsewhere in the Gulf.
When regional expansion is undertaken, the preferred approach will be to work through joint-venture partners with established networks, market knowledge, and operational capabilities in the target countries. The Selected GCC Markets have been identified as potential initial markets because their regulatory and technical requirements are closely aligned with those of Saudi Arabia.
This partnership-led model allows AlTayyar to pursue regional opportunities in a controlled and commercially responsible manner, without building new market operations independently from the ground up.



Strategic Priorities

- Primary focus: Strengthen manufacturing capability and market depth in Saudi Arabia before regional expansion.
- Preferred route: Enter target markets through established joint-venture partner networks.
- Initial markets of interest: The UAE and Bahrain, subject to commercial, regulatory, and partnership evaluation.
